

## Mobile Confined Space Training Trailer - TTH1000

This realistic environment features over 30m+ of tunnels over 2x levels and a ladder entry shaft. In the case of emergency rescue from the labyrinth, there are multiple access hatches on the side for safe evacuation.

Built to give you a realistic confined space environment and save you and your engineers on travel, Tecto Group<sup>®</sup> can provide a mobile training trailer which can be delivered to your site anywhere nationwide.

This realistic environment features over 30+m of tunnels spread over 2 levels and a ladder entry shaft.

In the case where a delegate requires to be rescued from the labyrinth, there are multiple access points situated around the mobile unit with direct access hatches on the side to safely bring them out.

All we require is a space on flat level ground with sufficient clearance all-round the unit for access and a classroom for the theory element of the training course.

The classroom can be a boardroom, meeting room etc. and needs to adequately seat and have desks for up to 10 delegates and a fully qualified trainer.

This amazing unit can be hired with or without a Qualified Trainer – after you have booked your hire dates online kindly complete a contact form and our training department will contact you to discuss all your requirements.
