6.1.2 Recharge Instrument using the 5-way Charger

The 5-way charger (Part No. 64138) allows the user to charge up to five PS200 instruments simultaneously.

Fig. 6-2 5-Way Charger

The 5-way charger accommodates up to five PS200 series instrument(s) with or without protective rubber boot fitted, as illustrated in Fig. 6-2

The charger is connected to mains supply using a universal power supply unit (PSU) supplied with the charger.

The charger can be freestanding, wall or workbench mounted by securing with suitable fixings (not supplied).

Before the instrument is located in any of the five charging bays, it is recommended that the instrument is switched OFF, the 'jumbo clip' is in the closed position and the 'belt hook' is upright.

Install the instrument in one of the vacant charging bays making sure that the locating tongue engages in corresponding slot in the base of the instrument and ensuring that the instrument is firmly seated in charging unit.

Charging is fully automated.

Instrument(s) can remain installed in the charger after charging is complete.
